Supplier of Capasal Therapeutic Shampoo

Capasal™ Therapeutic Shampoo

Salicylic acid, coconut oil, distilled coal tar

Capasal is a specially formulated therapeutic shampoo for the treatment of dry, scaly scalp conditions.

Capasal Therapeutic Shampoo contains 3 active ingredients;

Salicylic acid – to loosen and remove scale for improved appearance

Coconut oil – to soften and moisturise the scalp

Distilled coal tar – an anti-psoriatic and anti-itch to reduce scratching

Capasal Therapeutic Shampoo can be used for all of the conditions shown inside. It is also extremely efficient at washing out previously applied ointments or creams.

Good Hair Washing Technique

For scaly scalp shampoos to have their best effect, use a good hair washing technique.

Apply a small amount (the size of a 50 pence coin for short hair, adjusting up depending on length/thickness of hair) to wet hair and massage into the scalp. Leave this for a few minutes to loosen scale and allow the active ingredients to get to work. Remove the foam from the hair using the hands (this will remove the scales with it) and then rinse. Repeat if necessary.

Capasal can be used daily if required, reducing frequency of use to once or twice a week as the condition improves. Thereafter, occasional use may be necessary.

Wet hair and apply shampoo to produce a lather. Leave in place for a few minutes then physically remove foam with the hands before rinsing. Repeat if necessary.

Cradle Cap

A small amount of Capasal Therapeutic Shampoo should be used, sufficient to produce a lather. Wash off immediately with warm water. Gently pat the scalp dry with a towel.

Remember to rinse using a back washing technique, with baby's head supported by a hand and tilted backwards to avoid getting shampoo into the baby's eyes.
