

Novamol Protect™

A special combination of humectants (which attract and retain moisture) and a film-forming agent, PVP (povidone), to provide effective 24 hour hydration of the skin without the need for oils.

Relieves dry and itchy skin.

Free-flowing gel for ease of application.
For use by adults and elderly.

Directions: Gently smooth Novamol Protect across all dry skin areas once daily, or as often as needed, in the same direction as hair growth.

Storing Novamol Protect: Do not store above 25°C.
Do not freeze the product.

Ingredients: Aqua, urea, sodium lactate, ethylhexylglycerin, polyacrylate crosspolymer-6, phenoxyethanol, lactic acid, glycerin, PVP (povidone), tocopherol, t-butyl alcohol.

Fire retardance properties: This specially formulated emollient provides significant added protection for users. The clothing and bedding of people using emollients can be at an increased risk of catching fire. This is due to the ingredients used in some emollients being flammable and rubbing off the skin onto the clothes and bedding.

Clothing and bedding with Novamol Protect Emollient dried on them:

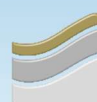

- should not be at increased risk of ignition from exposure to cigarettes, matches, or lighters;
- do not burn more readily when exposed to indirect flames, moderate heat or even high-energy flames, than fabrics without emollient.

For optimal safety, always practice responsible behaviour. Do not smoke near flammable materials and always handle heat and flame sources with care.

Any protective effect against the risk of fire may be reduced if Novamol Protect is used with other skin products.

Novamol Protect recommends: Keep out of reach of children. For external use only – avoid contact with the eyes. Emollients may initially cause tingling, itching or stinging, but this should reduce with regular use. If a rash occurs stop using this product. Your skin may be more sensitive than normal to sunburn when using this product.

Patent pending. 'Dermal' and 'Novamol Protect' are UK Registered Trademarks.
